

PRODUCT MANAGEMENT / TECHNICAL PRODUCTS

Alireza Nobakht

Associate Product Manager | Technical Product Candidate

E alireza.nobakht2004@gmail.com **M** (+98) 910-977-7936 **L** Tehran, Iran
GH github.com/alirezanobakht2004 **IN** linkedin.com/in/alireza-nobakht **W** Portfolio

PROFESSIONAL PROFILE

Product-management candidate with **2+ years of software-engineering experience** across backend, mobile, web, embedded, and geospatial products. I have not yet held a formal Product Manager title, but I have consistently enjoyed clarifying problems, organizing complex work, connecting technical components, improving user workflows, and guiding delivery toward measurable outcomes. My engineering depth allows me to communicate directly with developers, evaluate feasibility and risk, and grow toward **Technical Product Owner (TPO)** and Technical Product Manager responsibilities.

01 PRODUCT & TECHNICAL CAPABILITIES

PRODUCT DISCOVERY FOUNDATIONS

Problem framing, user needs, personas, journey mapping, value propositions, workflow analysis, competitor and market research fundamentals

REQUIREMENTS & SCOPE

Requirement clarification, user stories, acceptance criteria, feature decomposition, API and workflow specifications, scope and dependency awareness

PLANNING & PRIORITIZATION

Backlog and roadmap concepts, impact-versus-effort thinking, release planning, risk identification, trade-off communication, iterative delivery

TECHNICAL PRODUCT LEADERSHIP

Backend, mobile, web, embedded, APIs, databases, system architecture, feasibility discussions, technical risk and integration planning

DATA, QUALITY & OUTCOMES

KPI and product-metric foundations, performance analysis, validation, reliability, root-cause investigation, measurable continuous improvement

COMMUNICATION & FACILITATION

Technical documentation, stakeholder communication, mentoring, structured presentations, cross-functional collaboration, clear decision context

02 RELEVANT PROFESSIONAL EXPERIENCE

Software Developer & Embedded Systems Engineer

Hiromap (Hirongar Pars Company) | hiromap.com | Tehran, Iran

Feb 2024 - Present

- Translated field and operational needs into software workflows for geospatial data, navigation, device configuration, and connected-system products.
- Connected 3 technical platforms - STM32 firmware, Android applications, and desktop software - requiring dependency management, interface alignment, and end-to-end delivery thinking.
- Shaped admin and API workflows across 4 operational areas: users, services, configurations, and role-based access, improving clarity and maintainability of the product experience.
- Improved measurable product quality by reducing API response time by 40%, supporting 99.5% reported availability, and reducing manual field-entry errors by 40%.
- Balanced user constraints with technical feasibility, including low-connectivity field work, offline synchronization, real-time validation, serial communication, and secure large-file transfer.
- Produced documentation and diagnostic tooling that helped technical teams understand system behavior, troubleshoot issues, and make more informed implementation decisions.

Technical Instructor & Educational Consultant

Ghalamchi Educational Institute | Tehran, Iran

Aug 2022 - Jun 2023

- Managed structured learning plans during a 10-month engagement, adapting content and exercises to different learner needs and progress levels.
- Facilitated communication, feedback, and problem solving across programming fundamentals, algorithms, and software-development practices.

Problems, Users, Delivery & Outcomes

Engineering projects reframed through product thinking, workflow design, prioritization, and measurable value.

Geospatial Data Management System

Centralized survey-data and map workflow

Workflow Design

Requirements

Spring Boot

PostGIS

Map UX

Apr 2025

- Problem:** survey coordinates, measurements, and topographic layers needed a consistent way to be stored, retrieved, and visualized.
- Product contribution:** helped define upload, processing, retrieval, project, and map-rendering workflows across backend and web interfaces.
- Delivery:** implemented Spring Boot services, Hibernate-backed data access, spatial indexing, and React with Leaflet/OpenLayers for interactive layers.
- Value:** created a scalable foundation for faster access to large geospatial datasets and clearer management of field information.

Field Survey Data Collection App

Offline-capable workflow for field engineers

User Workflow

Offline Strategy

Android

REST

Validation

Jul 2024

- User constraint:** field teams needed reliable data capture despite weak or unavailable connectivity.
- Product contribution:** structured the journey for recording coordinates, notes, images, validation states, and later synchronization with a central service.
- Delivery:** implemented GPS tracking, local caching, secure REST sync, and administration workflows for projects, users, and reports.
- Outcome:** real-time validation and coordinate-correction logic reduced manual input errors by **40%**.

Travel Reservation Platform

Multi-role, multi-modal booking experience

3

transport modes

3

user roles

60%

faster response

May 2025

- Modeled end-to-end journeys** for 3 transportation modes and 3 roles: Admin, User, and Vendor.
- Decomposed complex workflows** into versioned APIs, permissions, standardized errors, and offline-capable mobile integration.
- Improved performance by 60%**, from 450 ms to 180 ms, while targeting 10k+ concurrent users.

Journey Mapping

Role Design

APIs

Redis

Connected Data & File Transfer

Cross-platform reliability and delivery

3

platforms

99.5%

success rate

35%

faster transfer

2024 - 2025

- Coordinated a workflow across firmware, Android, and desktop systems**, with clear interface and reliability requirements.
- Designed user-facing transfer behavior** including progress, resume, retry, alerts, configuration, and large-file chunking.
- Reached 99.5% transfer success** and 35% faster transfers for files larger than 100 MB.

Technical Scoping

Reliability

Android

Embedded

EDUCATION

B.Sc. Computer Engineering

K.N. Toosi University of Technology
Sep 2022 - Present

Expected graduation: 2026. Teaching Assistant for core programming courses. Study areas include software engineering, databases, algorithms, operating systems, networks, and embedded systems.

PRODUCT CAREER DIRECTION

Intentional transition into product management

I am seeking an Associate or Assistant Product Manager role where I can develop formal discovery, prioritization, roadmap, and stakeholder-management experience.

Long-term path: Technical Product Owner (TPO) / Technical Product Manager, combining product judgment with hands-on engineering fluency.

TECHNICAL FOUNDATION

A product candidate who can speak engineering

Java, Spring Boot, C#/.NET, REST APIs, SQL, Redis, Android, React, Docker, Git, STM32, GPS/IMU, real-time and connected systems.

Persian - Native
English - Intermediate / Professional
